More good science talks

I voted agree but do like the ideas about bringing in more researchers beyond those of us embedded in CBP all the time

Concerns about the meeting/workload burden for those who are more peripheral to the strict sense of science and research.

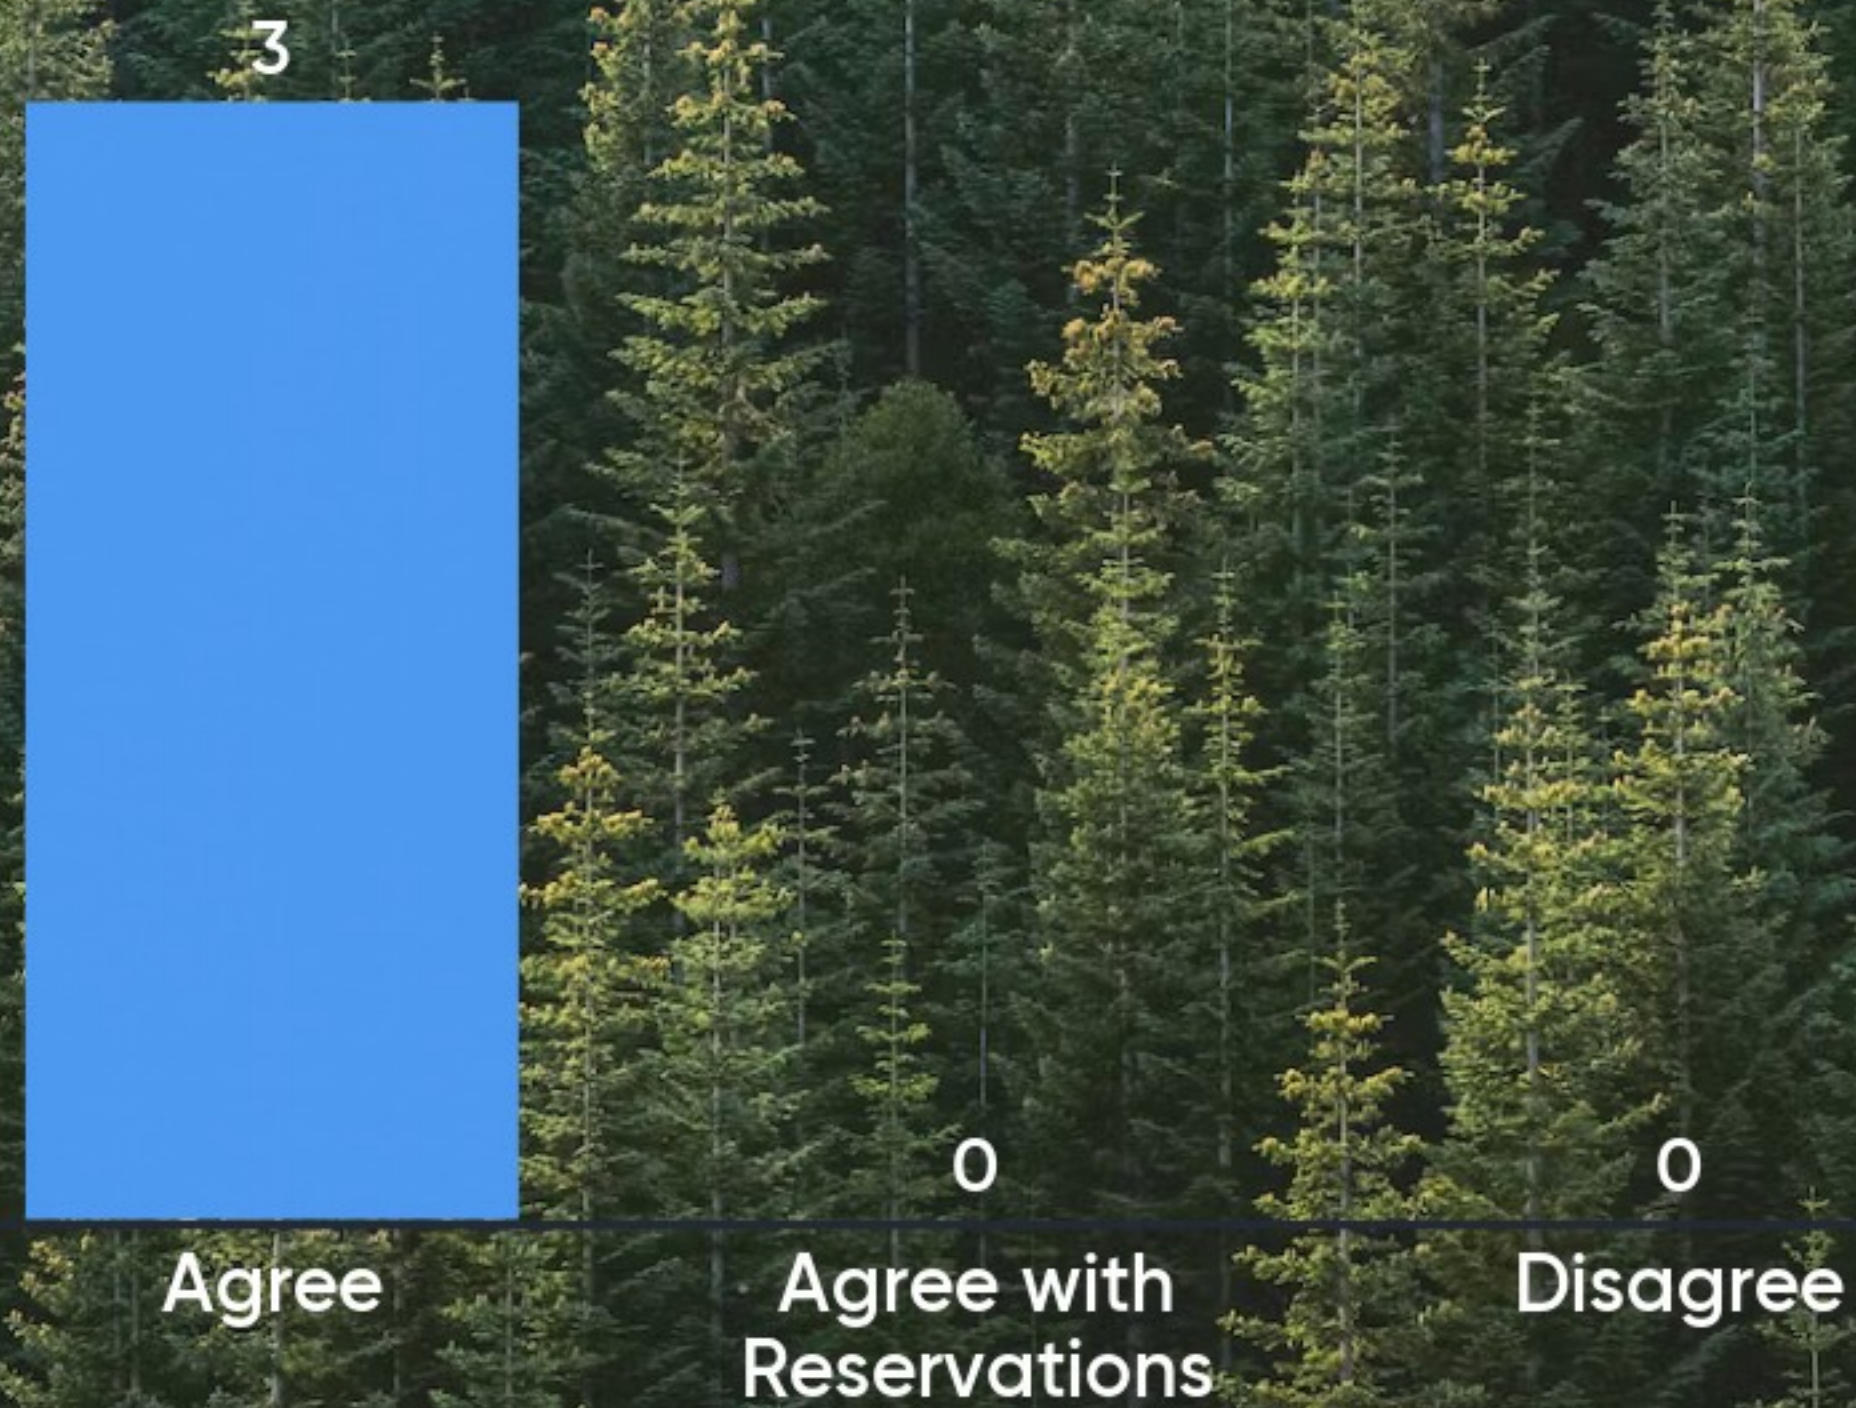

Some of the groups suggested include the same sets of people as the other groups. e.g., SET is mostly coordinators.

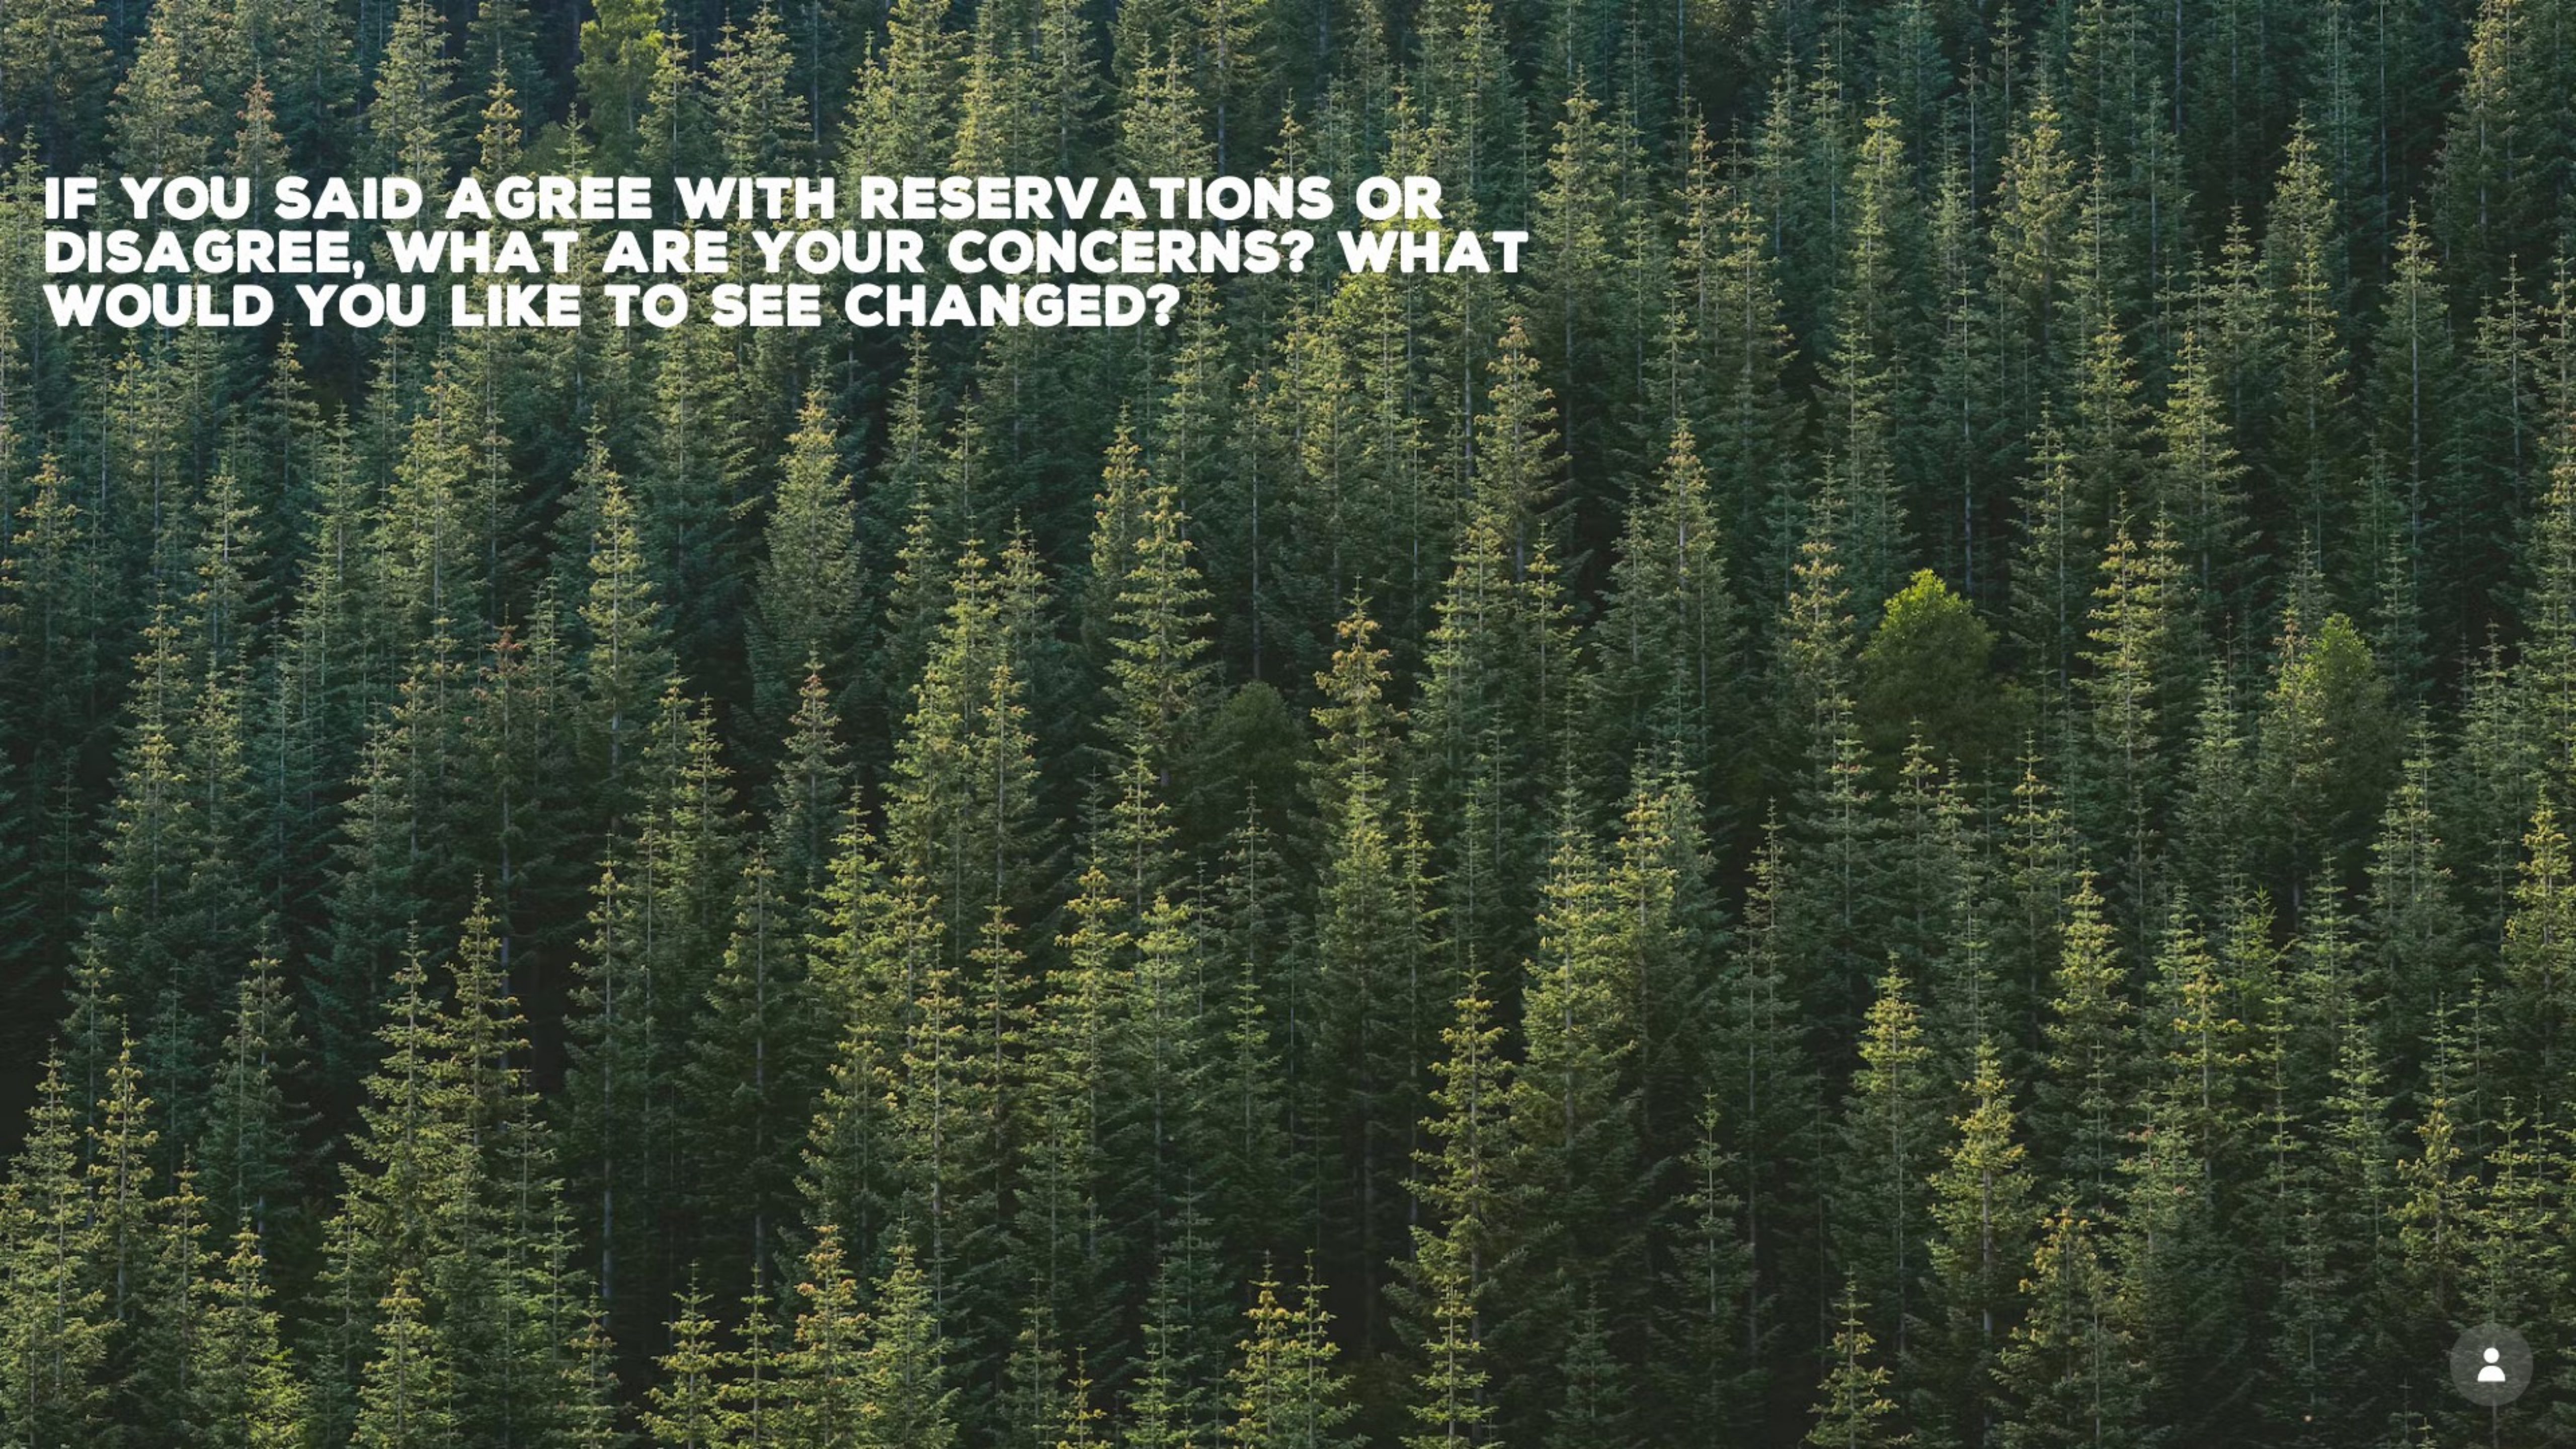

nothing more to add

It could be useful to go round robin for GIT priorities scheduled out over the next year. Each Git (coordinator staffer) help identify schedule. Once or twice a year, with lots of advance notice.

clearer picture of how the many science needs are being funded or not and where they are being met how they advance outcome attainment

APPROVAL OF STAR SCOPE AND PURPOSE DOCUMENT
